PRESS RELEASE

Trex Partners with NatureAlpha to Expand its Asset-Level Intelligence

London, 10 December 2025 – Trex, the non-linear climate scenario data platform for professional investors, has partnered with nature data and analytics business, NatureAlpha, to expand its company hazard impact capability with asset-level location intelligence.

Trex's integration of NatureAlpha's Geoverse platform strengthens the shift from measuring climate exposure to demonstrating credible risk mitigation. By combining Trex's forward-looking, non-linear hazard insights with high-resolution asset intelligence, financial institutions can see how risks evolve, which assets and value chains are affected, and where mitigation is needed.

Following extensive market due diligence, NatureAlpha's Geoverse platform was selected for its breadth, depth, and consistency of its global asset coverage - enabling Trex to deliver to clients a comprehensive, asset-level physical climate risk offering that stands up to regulatory scrutiny and supports risk mitigation decisions.

Willemijn Verdegaal, Co-CEO, Trex: "We are thrilled that via this partnership Trex is now able to double our hazard to company impact transmission channels. Due to NatureAlpha's best-in-class asset location data, we now capture the impacts of hazards and tipping points on expected company revenues via impact on consumption of goods and services produced, as well as damages to their locations. We believe that this innovation will enable the financial community to make decisions that increase their resilience with confidence."

Nick Hough-Robbins, CEO, NatureAlpha, commented: "Amongst financial institutions, precise asset location data was once considered a niche concern, but it is increasingly regarded as a core component of financial risk analysis – and rightly so. Exploiting the transformative power of AI, NatureAlpha's Geoverse platform analyses over 10 million precise asset locations worldwide, with credibility, consistency and accuracy. We are privileged to partner with Trex, through the integration of our platform, and help provide financial institutions with the tools necessary to confidently manage risks and ensure long-term resilience."

Notes to Editors:

About Trex

A commercial spin-out from Exeter University that bridges climate science and finance, Trex provides non-linear climate intelligence for financial resilience and competitive advantage. Its category defining modelling uniquely captures real-world dynamics, tipping-point-informed scenarios, and company-level analysis built consistently from top-down country and sector data. It generates over one billion datapoints across extreme weather and energy transition impacts, helping financial firms and businesses make climate-resilient decisions. www.trexanalysis.com

About NatureAlpha

NatureAlpha provides AI and data-driven insights to support a range of solutions including nature and biodiversity risk-related metrics, indexed products, compliance tools and nature-linked financial consulting. NatureAlpha utilises curated datasets from the world's most authoritative scientific, regulatory, corporate and governmental sources including internationally agreed goals as detailed in the Convention for Biodiversity and IUCN, and in line with the Task Force for Nature-related Financial Disclosures' framework. www.naturealpha.ai
